

ELMaWi-Transfer – Fostering subject-specific competencies of prospective teachers using video-based ELMaWi tools

The research proposal “ELMaWi-Transfer - Fostering subject-specific competencies of prospective mathematics and economics teachers using video-based ELMaWi tools” from the Chair of Business Education (Dr. Christiane Kuhn, Prof. Dr. Olga Zlatkin-Troitschanskaia, Hannes Saas) has been positively evaluated by the Federal Ministry of Education and Research and recommended for further funding. The transfer project was submitted in cooperation with the Leibniz Institute for Science and Mathematics Education in Kiel (IPN, Department of Mathematics Education) and represents a continuation of the successful joint ELMaWi project (www.elmawi.de).

The ELMaWi-Transfer project aims (1) to provide a concept for an online teaching-learning environment to foster and assess practical competencies of prospective teachers and (2) to implement the newly developed concept in the area of teacher education for economics and mathematics at the locations of our cooperating partners and evaluate the success of the transfer process.
