

Technology and Business: Integrated Education (TWIND)

The proposal for “Technology and Business: Integrated Education (TWIND)” submitted by the Chair of Business and Economic Education (Prof. Dr. Christian Dormann, Dr. Christiane Kuhn, Prof. Dr. Olga Zlatkin-Troitschanskaia) and its partners was positively evaluated in the Teacher Training Quality Campaign jointly funded by the German federal and state governments.

Over the next four years, JGU will receive EUR 1.2 million to develop and sustainably establish teaching-learning approaches and tools for vocational teacher training. In total, the collaborative project of JGU Mainz, Technische Universität Darmstadt, Universität Kassel und Pädagogische Hochschule Schwäbisch Gmünd receives EUR 2.4 million.

The TWIND project develops and establishes digital teaching-learning approaches and tools for the effective initial and continuing education of prospective teachers at vocational schools. It aims to interlink economic, technical and general education didactics.
