Definition

A Choice Process Data Set (X, C) comprises of:

- finite set X
- choice function $C: \mathcal{X} \to \mathcal{Z}$

such that $C(A) \in \mathcal{Z}_A \ \forall \ A \in \mathcal{X}$

• $C_A(t)$: choice made from set A after contemplation time t

Alternative-Based Search

• DM is equipped with a utility function

 $u:X\to \mathbb{R}$

Alternative-Based Search

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

• DM is equipped with a utility function

$$u: X \to \mathbb{R}$$

• and a search correspondence

$$S: \mathcal{X} \to \mathcal{Z}$$

with $S_A(t) \subseteq S_A(t+s)$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

• DM is equipped with a utility function

$$u: X \to \mathbb{R}$$

• and a search correspondence

$$S: \mathcal{X} \to \mathcal{Z}$$

with $S_A(t) \subseteq S_A(t+s)$

 Such that the DM always chooses best option of those searched

$$\mathcal{C}_{\mathcal{A}}(t) = \arg \max_{x \in \mathcal{S}_{\mathcal{A}}(t)} u(x)$$

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

• Finally choosing x over y does not imply (strict) revealed preference

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- Finally choosing x over y does not imply (strict) revealed preference
 - DM may not know that y was available

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- Finally choosing x over y does not imply (strict) revealed preference
 - DM may not know that y was available
- Replacing y with x does imply (strict) revealed preference

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

- Finally choosing x over y does not imply (strict) revealed preference
 - DM may not know that y was available
- Replacing y with x does imply (strict) revealed preference
 - DM must know that y is available, as previously chose it

- Finally choosing x over y does not imply (strict) revealed preference
 - DM may not know that y was available
- Replacing y with x does imply (strict) revealed preference
 - DM must know that y is available, as previously chose it
 - Now chooses x, so must prefer x over y

- Finally choosing x over y does not imply (strict) revealed preference
 - DM may not know that y was available
- Replacing y with x does imply (strict) revealed preference
 - DM must know that y is available, as previously chose it
 - Now chooses x, so must prefer x over y
- Choosing x and y at the same time reveals indifference

- Finally choosing x over y does not imply (strict) revealed preference
 - DM may not know that y was available
- Replacing y with x does imply (strict) revealed preference
 - DM must know that y is available, as previously chose it
 - Now chooses x, so must prefer x over y
- Choosing x and y at the same time reveals indifference
- Use \succ^{ABS} to indicate ABS strict revealed preference

- Finally choosing x over y does not imply (strict) revealed preference
 - DM may not know that y was available
- Replacing y with x does imply (strict) revealed preference
 - DM must know that y is available, as previously chose it
 - Now chooses x, so must prefer x over y
- Choosing x and y at the same time reveals indifference
- Use \succ^{ABS} to indicate ABS strict revealed preference
- Use \sim^{ABS} to indicate revealed indifference

• Choice process data will have an ABS representation if and only if \succ^{ABS} and \sim^{ABS} can be represented by a utility function u

- Choice process data will have an ABS representation if and only if \succ^{ABS} and \sim^{ABS} can be represented by a utility function u
- A useful lemma:

- Choice process data will have an ABS representation if and only if \succ^{ABS} and \sim^{ABS} can be represented by a utility function u
- A useful lemma:
 - P, I binary relations on (finite X), I symmetric

- Choice process data will have an ABS representation if and only if \succ^{ABS} and \sim^{ABS} can be represented by a utility function u

- Choice process data will have an ABS representation if and only if ≻^{ABS} and ~^{ABS} can be represented by a utility function u
- A useful lemma:
 - P, I binary relations on (finite X), I symmetric
 - $PI = P \cup I$
 - There exists a $v: X \to \mathbb{R}$ that represents *PI*

$$\begin{array}{rcl} x P y & \to & v(x) > v(y) \\ x I y & \to & y(x) = v(y) \end{array}$$

• If and only if P and I satisfy Only Weak Cycles

$$x_1 P I x_2, \ldots, x_{n-1} P I x_n P I x_1$$

then there is no k such that $x_k P x_{k+1}$

Theorem 1

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

Theorem Choice process data admits an ABS representation if and only if \succ^{ABS} and \sim^{ABS} satisfy Only Weak Cycles

Outline

1 Introduction

2 Theory Alternative Based Search Reservation Based Search

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

Reservation-Based

• ABS silent on when people stop searching

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

- ABS silent on when people stop searching
- Consider a refinement: Reservation-based search (RBS)

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- ABS silent on when people stop searching
- Consider a refinement: Reservation-based search (RBS)
 - DM has a reservation utility level

- ABS silent on when people stop searching
- Consider a refinement: Reservation-based search (RBS)
 - DM has a reservation utility level
 - Stops searching if and only finds an option with utility above this level

- ABS silent on when people stop searching
- Consider a refinement: Reservation-based search (RBS)
 - DM has a reservation utility level
 - Stops searching if and only finds an option with utility above this level
- Equivalent to Simon's [1955] concept of satisficing

- ABS silent on when people stop searching
- Consider a refinement: Reservation-based search (RBS)
 - DM has a reservation utility level
 - Stops searching if and only finds an option with utility above this level
- Equivalent to Simon's [1955] concept of satisficing
- Also optimal stopping rule for fixed search costs and no learning
• Choice process data admits an **RBS representation** if we can find

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

- Choice process data admits an **RBS representation** if we can find
 - An ABS representation (*u*, *S*)

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

- Choice process data admits an **RBS representation** if we can find
 - An ABS representation (u, S)
 - A reservation level ρ

- Choice process data admits an **RBS representation** if we can find
 - An ABS representation (*u*, *S*)
 - A reservation level ρ
- Such that search stops if and only if an above reservation object is found

$$\begin{array}{rcl} \text{if } u(x) &< & \rho \; \forall \; x \in S_A(t) / A \; \text{then} \; S_A(s) \supset S_A(t) \; \text{for some} \; s > t \\ \text{if } u(x) &\leq & \rho \; \text{some} \; x \in S_A(t) / A \; \text{then} \; S_A(s) = S_A(t) \; \text{for} \; \forall \; s > t \end{array}$$

- Choice process data admits an **RBS representation** if we can find
 - An ABS representation (*u*, *S*)
 - A reservation level ρ
- Such that search stops if and only if an above reservation object is found

$$\begin{array}{rcl} \text{if } u(x) &< & \rho \; \forall \; x \in S_A(t) / A \; \text{then} \; S_A(s) \supset S_A(t) \; \text{for some} \; s > t \\ \text{if } u(x) &\leq & \rho \; \text{some} \; x \in S_A(t) / A \; \text{then} \; S_A(s) = S_A(t) \; \text{for} \; \forall \; s > t \end{array}$$

• Note: Implies complete search of sets comprising only of below-reservation objects

• Final choice can now contain revealed preference information

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- Final choice can now contain revealed preference information
 - If final choice is below-reservation utility

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

 If one of x of y is in X^{IN} and x is finally chosen from some set A then, x ≻^L y

- If one of x of y is in X^{IN} and x is finally chosen from some set A then, x ≻^L y
 - If x is is in X^{IN}, then A must have been fully searched, and so x must be preferred to y

- If one of x of y is in X^{IN} and x is finally chosen from some set A then, x ≻^L y
 - If x is is in X^{IN}, then A must have been fully searched, and so x must be preferred to y
 - If y is in X^{IN}, then either y is below reservation level, in which case the set is fully searched, or x is above reservation utility

- If one of x of y is in X^{IN} and x is finally chosen from some set A then, x ≻^L y
 - If x is is in X^{IN}, then A must have been fully searched, and so x must be preferred to y
 - If y is in X^{IN}, then either y is below reservation level, in which case the set is fully searched, or x is above reservation utility

• Let
$$\succ^{RBS} = \succ^{L} \cup \succ^{ABS}$$

Theorem 2

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

Theorem Choice process data admits an RBS representation if and only if \succ^{RBS} and \sim^{ABS} satisfy Only Weak Cycles

	Normal Choice	29	65		

Question 1: Does Choice Process Elicitation Change Behavior?

enserver server el com

ini*

Question 2: Can Data be Described by a 'Reservation Stopping Time'?

▲□▶ ▲□▶ ▲臣▶ ▲臣▶ 三臣 - の��

Outline

▲□▶ ▲圖▶ ▲臣▶ ▲臣▶ ―臣 … のへで

1 Introduction

2 Theory

3 Experiment

Mistakes Eliciting Choice Process Data Testing Alternative-Based Search Satisficing Search Order

• Choice process data also makes search order visible

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

- Choice process data also makes search order visible
- Want to test how search order is affected by

- Choice process data also makes search order visible
- Want to test how search order is affected by
 - Screen position

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 の�?

- Choice process data also makes search order visible
- Want to test how search order is affected by
 - Screen position
 - Complexity

▲ロト ▲帰ト ▲ヨト ▲ヨト - ヨ - の々ぐ

- Choice process data also makes search order visible
- Want to test how search order is affected by
 - Screen position
 - Complexity
- Ran a new treatment in which complexity varies within choice round

Search Order

• In aggregate, subjects search

- In aggregate, subjects search
 - From the top of the list to the bottom of the list

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- In aggregate, subjects search
 - From the top of the list to the bottom of the list
 - · From simple objects to more complicated objects

- In aggregate, subjects search
 - From the top of the list to the bottom of the list
 - · From simple objects to more complicated objects
- We can also identify different search types

- In aggregate, subjects search
 - From the top of the list to the bottom of the list
 - From simple objects to more complicated objects
- We can also identify different search types
 - Top-Bottom (TB) searchers

- In aggregate, subjects search
 - From the top of the list to the bottom of the list
 - From simple objects to more complicated objects
- We can also identify different search types
 - Top-Bottom (TB) searchers
 - Simple-Complex (SC) searchers

Search Types

<□ > < @ > < E > < E > E のQ @

Search Types				
	TB Search			
	Yes	No		
SC Search Yes	7	4		
No	7	2		

Search Types Predict Choice - Example 1

Finished

◆□ > ◆□ > ◆豆 > ◆豆 > ̄豆 = のへで

Search Types Predict Choice - Example 2

Finished

▲ロト ▲帰ト ▲ヨト ▲ヨト - ヨ - の々ぐ

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

• In Example 1, pure simple-complex searchers find best option more than pure top-bottom searchers

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへで

- In Example 1, pure simple-complex searchers find best option more than pure top-bottom searchers
 - 100% vs 66% of the time

- In Example 1, pure simple-complex searchers find best option more than pure top-bottom searchers
 - 100% vs 66% of the time
- In Example 2, pure top-bottom searchers find best option more than pure simple-complex searchers

- In Example 1, pure simple-complex searchers find best option more than pure top-bottom searchers
 - 100% vs 66% of the time
- In Example 2, pure top-bottom searchers find best option more than pure simple-complex searchers
 - 80% vs 66% of the time

- In Example 1, pure simple-complex searchers find best option more than pure top-bottom searchers
 - 100% vs 66% of the time
- In Example 2, pure top-bottom searchers find best option more than pure simple-complex searchers
 - 80% vs 66% of the time
- Differences have low significance due to small sample sizes
What Next?

• Standard choice objects

What Next?

- Standard choice objects
 - e.g. lotteries

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

- Standard choice objects
 - e.g. lotteries
- Different decision making types

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

- Standard choice objects
 - e.g. lotteries
- Different decision making types
 - e.g. effect of aging

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- Standard choice objects
 - e.g. lotteries
- Different decision making types
 - e.g. effect of aging
- Real applications

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- Standard choice objects
 - e.g. lotteries
- Different decision making types
 - e.g. effect of aging
- Real applications
 - e.g. choice of retirement portfolio

- Standard choice objects
 - e.g. lotteries
- Different decision making types
 - e.g. effect of aging
- Real applications
