Bachelor of Science in Wirtschaftswissenschaften

Macroeconomics II: Behavioural Macro

Summer 2018

Prof. Dr. Klaus Wälde (Forschungssemester)

Jean Roch Donsimoni (lecture) and Hoang Van Khieu (tutorials)

www.macro.economics.uni-mainz.de
March 27, 2018

Contents

1 Organizational matters **1**

2 The idea of this lecture **2**
2.1 Some background on behavioural macro 2
2.2 The structure of the lecture 3

I Emotional Economics **5**

3 Introduction **5**
3.1 Questions asked in Part I 5
3.2 Some background from the psychological literature 8
3.3 Some background from the economic literature 13
3.4 Classification of emotions 15

4 Which role do emotions play in economic research? **17**
4.1 Emotions in classical economics 18
4.2 Absence of emotions in Neoclassical decision making? 19
4.2.1 Preference-based approach 21
4.2.2 Choice-based approach 25

4.2.3 Emotions in neoclassical decision making or not? . . . 29
4.3 Emotions in behavioural economics – the current view . . . 32
4.3.1 Back to Bentham . . . 33
4.3.2 Happiness literature . . . 36
4.3.3 Experienced utility vs decision utility in theory . . . 40
4.4 Exercises . . . 42
4.4.1 Decision-making: preference- and choice-based approaches . . . 42
4.4.2 Happiness and unemployment (Clark & Oswald, 1994) . . . 43

5 How do economists model emotions? 44
5.1 Background: Expected utility maximization . . . 44
5.2 Ex-post emotions . . . 52
5.2.1 Loomes and Sugden (1982) – regret and rejoicing . . . 53
5.2.2 Loomes and Sugden's motivation . . . 56
5.2.3 Loomes and Sugden (1986) – disappointment and elation . . . 59
5.2.4 Gul (1991) . . . 60
5.3 Ex-ante emotions - anxiety, worry and fear . . . 62
5.3.1 The setup . . . 62
5.3.2 Optimal behaviour and comparative statics . . . 67
5.4 Immediate emotions . . . 71
5.4.1 Hunger, thirst, pain, desire . . . 71

5.4.2 Laibson (2001) - Cue theory of consumption . . . 73
5.4.3 Stress (Wälde, 2015) . . . 79
5.5 Belief-based emotions . . . 89
5.5.1 Psychological game theory . . . 89
5.5.2 Game theory: Background and extensive form games . . . 90
5.5.3 Psychological game theory: The bravery game . . . 91
5.5.4 Guilt . . . 101
5.6 Fairness and altruism . . . 111
5.7 Exercises . . . 112
5.7.1 Regret theory (Loomes and Sugden, 1982) . . . 112
5.7.2 Anticipatory emotions and anxiety (Caplin and Leahy, 2001) . . . 114
5.7.3 Immediate emotions and state-dependent preferences . . . 115
5.7.4 Cue theory of consumption (Laibson, 2001) . . . 116
5.7.5 Stress (Wälde, 2016) . . . 118
5.7.6 Psychological Game Theory: The Bravery Game . . . 118

6 Conclusion **119**

II Behavioural economics **123**

7 Overview **123**
7.1 General idea . . . 123
7.2 Specific papers in behavioural theory . . . 124
7.3 What we do here at JGU . . . 125

8 Bounded willpower and automatic behaviour **126**
8.1 The plan . . . 126
8.2 The model . . . 128
8.3 Individual behaviour . . . 130
8.4 Summary . . . 134
8.5 Exercises . . . 136
8.5.1 Addiction and Automatic Processes (Bernheim and Rangel, 2004) . . . 136

9 Time consistent and time inconsistent behaviour **138**
9.1 Time consistency . . . 138
9.1.1 Two-period utility maximization under certainty . . . 138
9.1.2 Three-period utility maximization under uncertainty . . . 139
9.1.3 Where can we see that decision making is time consistent? . . . 142
9.2 Time inconsistency . . . 144
9.2.1 Exponential/ geometric discounting . . . 145
9.2.2 Non-exponential discounting . . . 147

9.2.3 Quasi-hyperbolic discounting . . . 149
9.2.4 O'Donoghue and Rabin (1999) . . . 152
9.3 Exercises . . . 160
9.3.1 Three-period savings problem . . . 160
9.3.2 Time (in)consistency (Laibson, 1997; O'Donoghue and Rabin, 1999) [MATLAB] . . . 161

10 Conclusion **163**

III How behavioural macro could look like **166**

11 The plan **166**

12 Unemployment and time inconsistency **168**
12.1 Models of unemployment . . . 168
12.1.1 A reminder of voluntary unemployment . . . 169
12.1.2 A reminder of involuntary unemployment . . . 170
12.1.3 A reminder of matching models of unemployment . . . 172
12.2 A pure search model of unemployment . . . 175
12.2.1 The basic idea . . . 176
12.2.2 Expected utility once employed . . . 177

12.2.3 The optimal search strategy . . . 186
12.2.4 The discounted expected utility (value function) of a job seeker . . . 187
12.2.5 Reservation wage . . . 188
12.2.6 Hazard rates and average duration in unemployment . . . 189
12.3 Search unemployment and time inconsistency . . . 191
12.3.1 Pure search in discrete time with time consistent behaviour . . . 192
12.3.2 Pure search and time inconsistency . . . 196
12.4 Conclusion . . . 199
12.5 Exercises . . . 201
12.5.1 Pure search model of unemployment . . . 201
12.5.2 Pure search in discrete time and time consistent behaviour [MATLAB] . 203

13 Growth, cues and automatic behaviour **205**
13.1 Models of growth . . . 206
13.1.1 The Solow model with technological progress and population growth . . . 206
13.1.2 A simple model of endogenous growth: The AK model . . . 215
13.1.3 Conclusion . . . 226
13.2 Cues and automatic behaviour . . . 230
13.2.1 Reminding of cues . . . 231
13.2.2 Reminding of automatic behaviour . . . 233
13.2.3 Linking the two . . . 235

13.3 Exercises . . . 237
13.3.1 Growth paths [MATLAB] . . . 237
13.3.2 Optimal consumption paths . . . 238

14 Business Cycles and Anxiety **241**
14.1 Business cycles in an OLG model . . . 241
14.1.1 The structure of a simple RBC model . . . 242
14.1.2 Some references . . . 242
14.1.3 Technology . . . 243
14.1.4 Timing . . . 245
14.1.5 Firms . . . 246
14.1.6 Households and intertemporal optimization . . . 247
14.1.7 Aggregation over individuals and firms . . . 250
14.1.8 The dynamics of TFP, the capital stock and output . . . 252
14.1.9 What have we learned? . . . 254
14.2 Business cycles and anxiety: towards a complete analysis . . . 256
14.2.1 The effect of anxiety . . . 256
14.2.2 Aggregation over individuals and firms . . . 257
14.2.3 How anxiety affects the distribution of wealth . . . 259
14.3 Exercises . . . 263
14.3.1 Business cycles [MATLAB] . . . 263

IV Wealth distributions and redistribution **266**

15 Origins of wealth distributions **266**
15.1 Some facts . . . 266
15.2 Determinants of wealth distributions . . . 268

16 A simple model **269**
16.1 The setup . . . 269
16.2 Equilibrium . . . 272
16.3 The distribution of wealth . . . 275
16.4 The mean and variance of the wealth distribution . . . 278
16.5 What do we learn from this? . . . 284

17 Conclusion **286**

V Summary **288**

18 General idea of the lecture **288**

19 Big messages **290**
