

# Pronouns in Kolbila

Presented at the 6th World Congress of African  
Linguistics

20 August, 2009

“Wales (1996: 4) suggests the possibility of regarding pronouns as words that function primarily as useful ‘shorthand’ referring expressions that are alternatives either to ostensibly more explicit or descriptive forms, or to forms as more cumbersome. Wales points out that pronouns generally have a low semantic content, which derives from the fact that their primary function is to avoid repetition. They may occur in their full form as referring expressions or in their truncated form as affixes while being parts of other expressions like adjectives or verbs. (Bath:2004: 3) “
