

# Parameterization-based tracking for the P2 experiment

Iurii Sorokin

PRISMA Cluster of Excellence /  
Institute for Nuclear Physics, University of Mainz

DPG-Frühjahrstagung 2018, Würzburg

Tracking = track finding + track fitting

# P2 setup

# P2 setup

# GEANT4 simulation

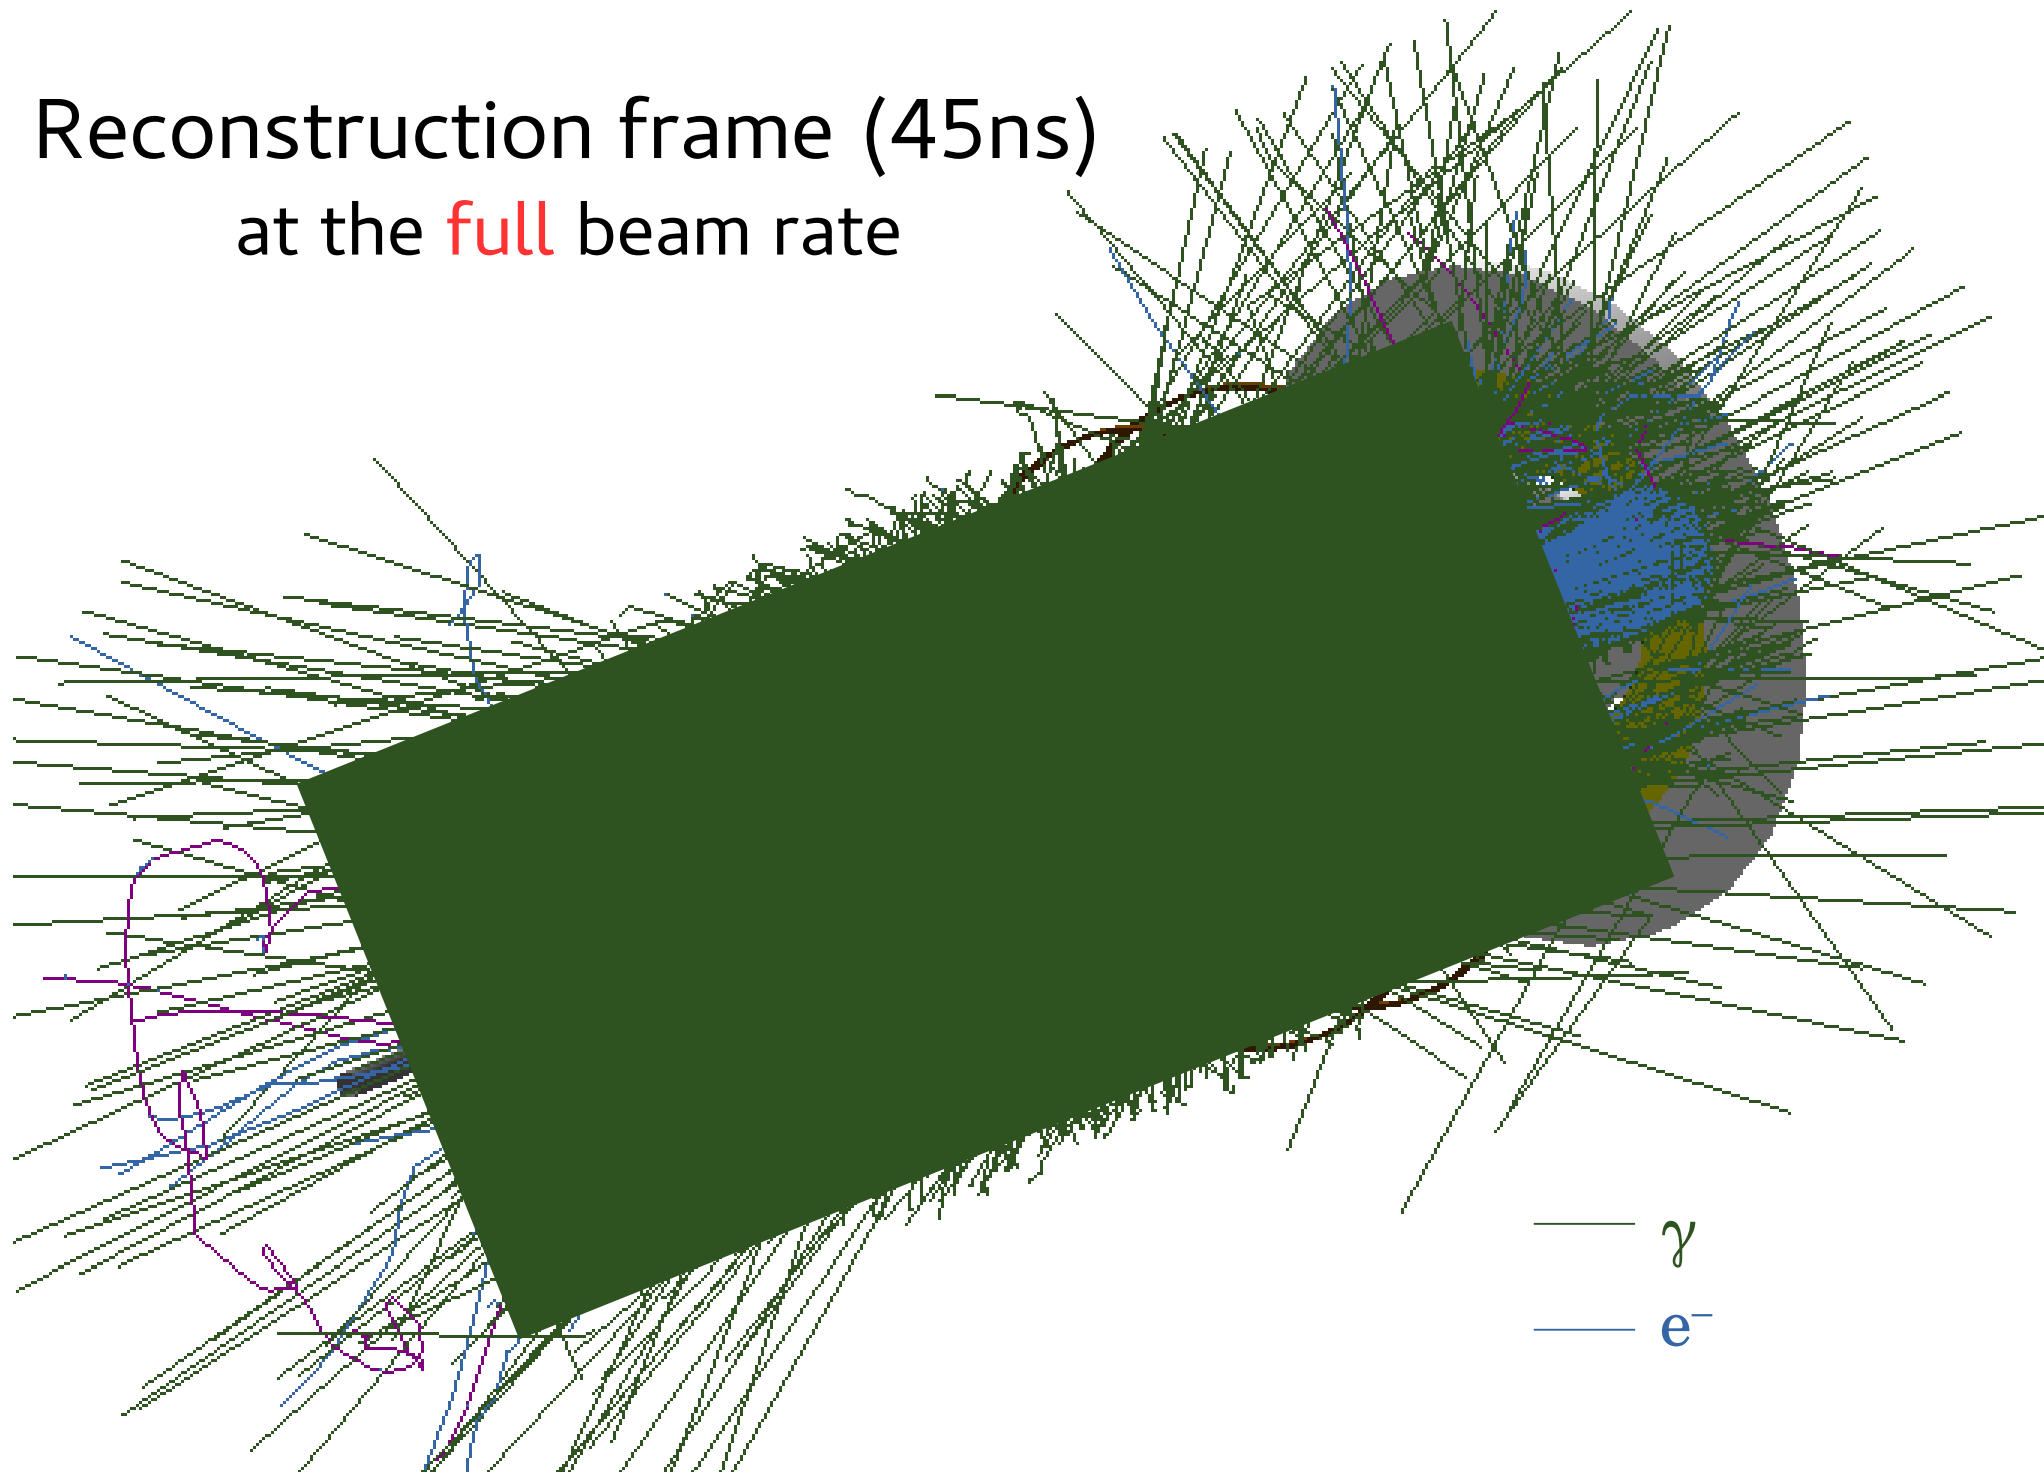

(only relevant components displayed)

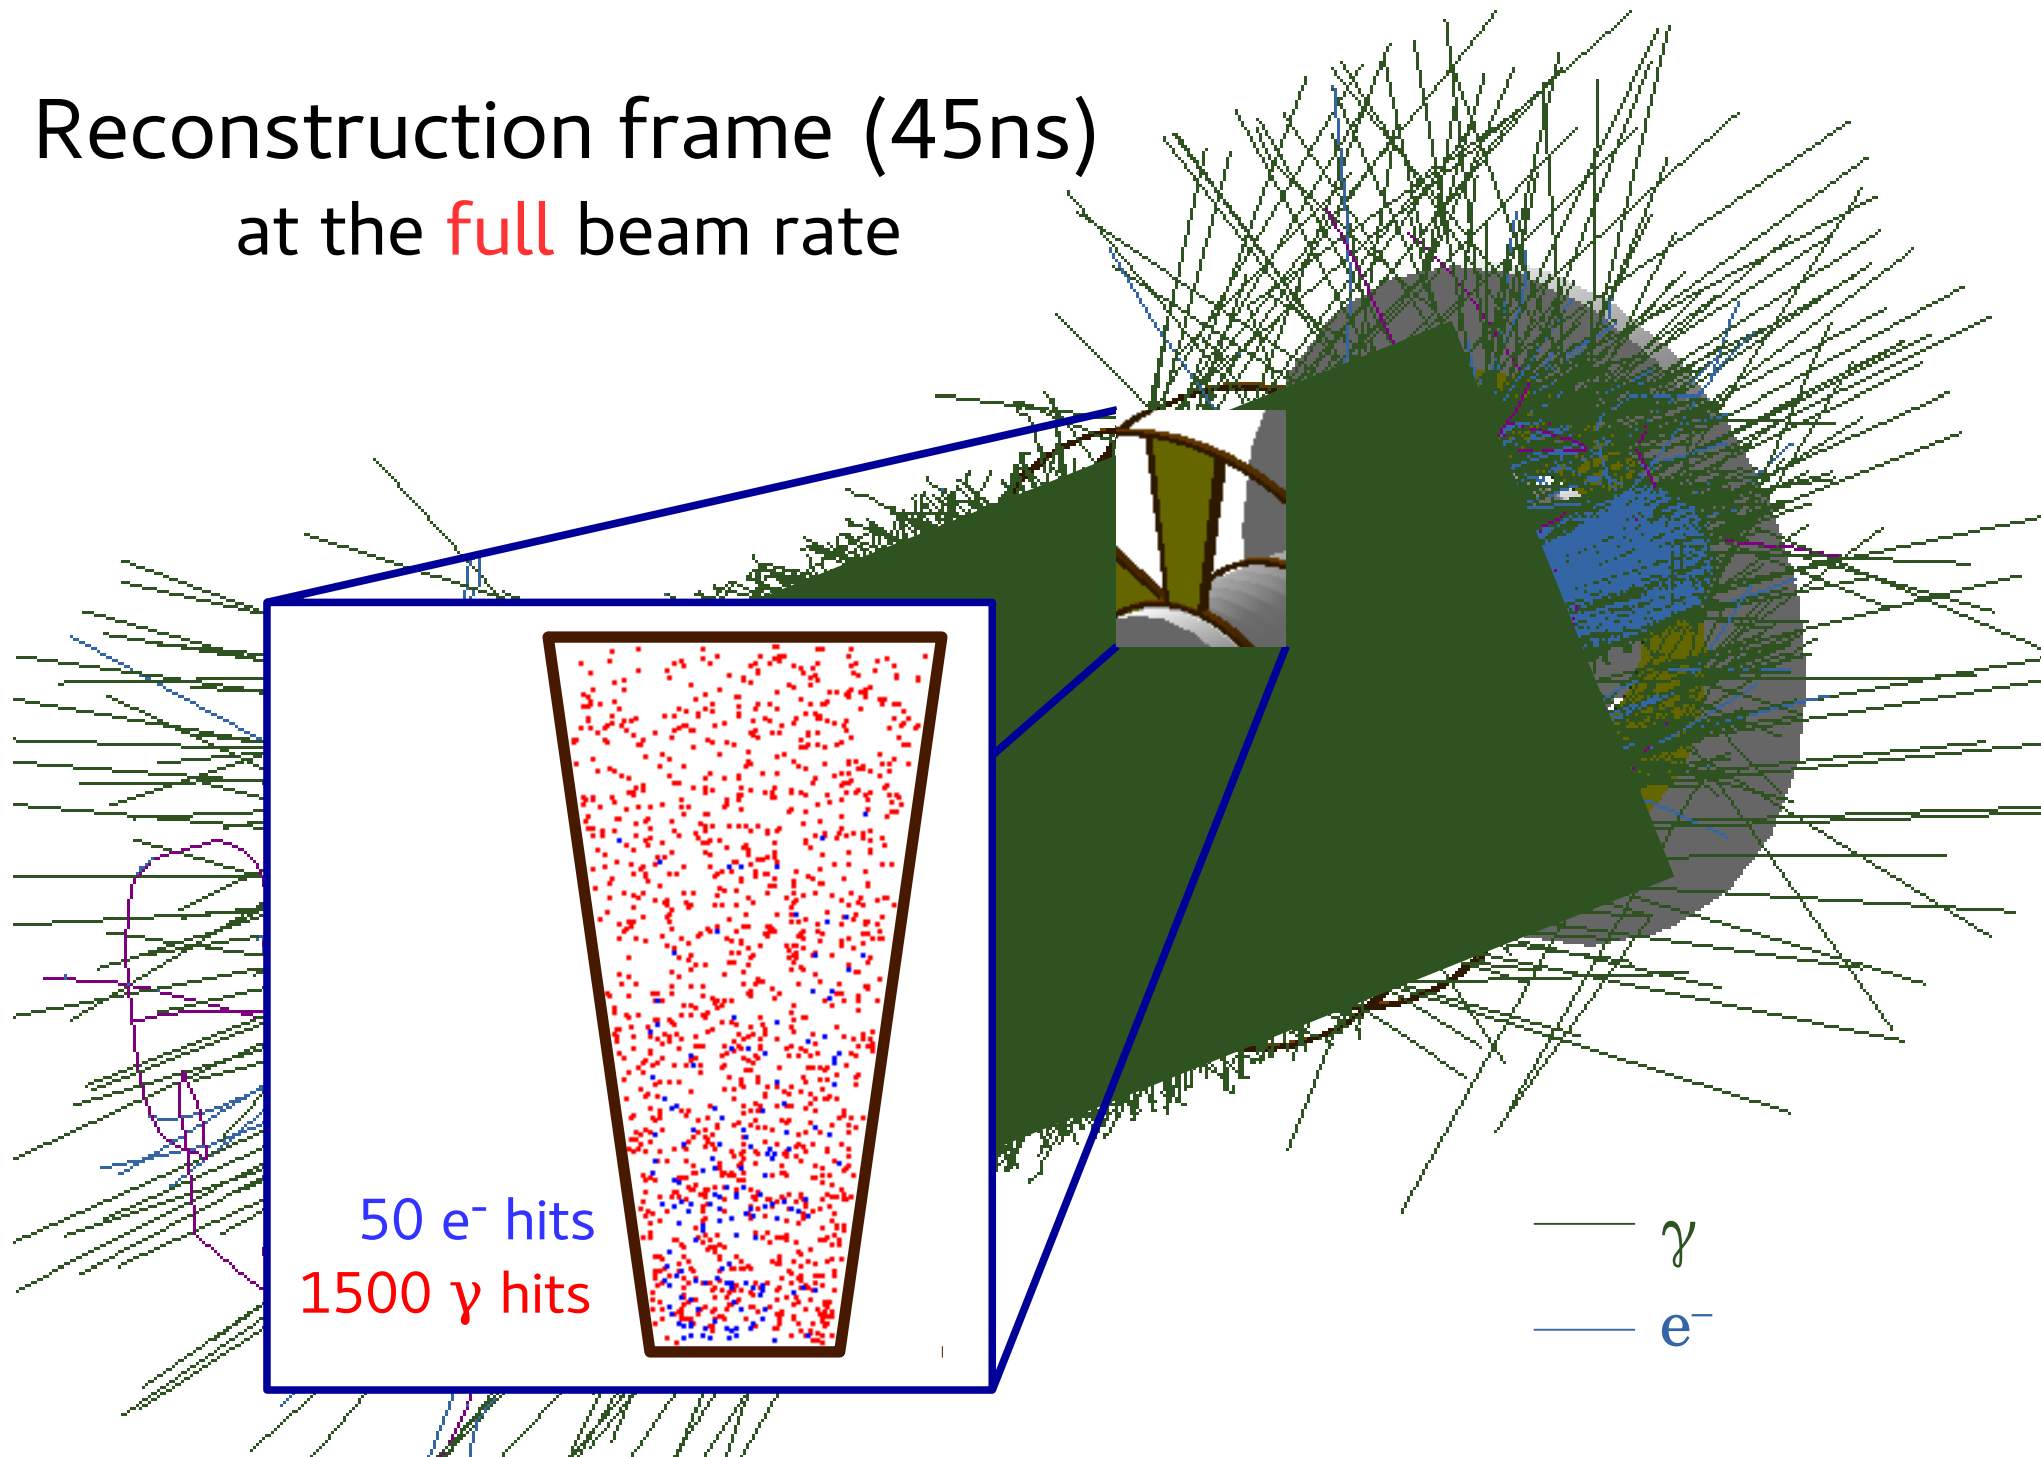

Reconstruction frame (45ns)  
at 1% beam rate

Reconstruction frame (45ns)  
at the **full** beam rate

# Reconstruction frame (45ns) at the **full** beam rate

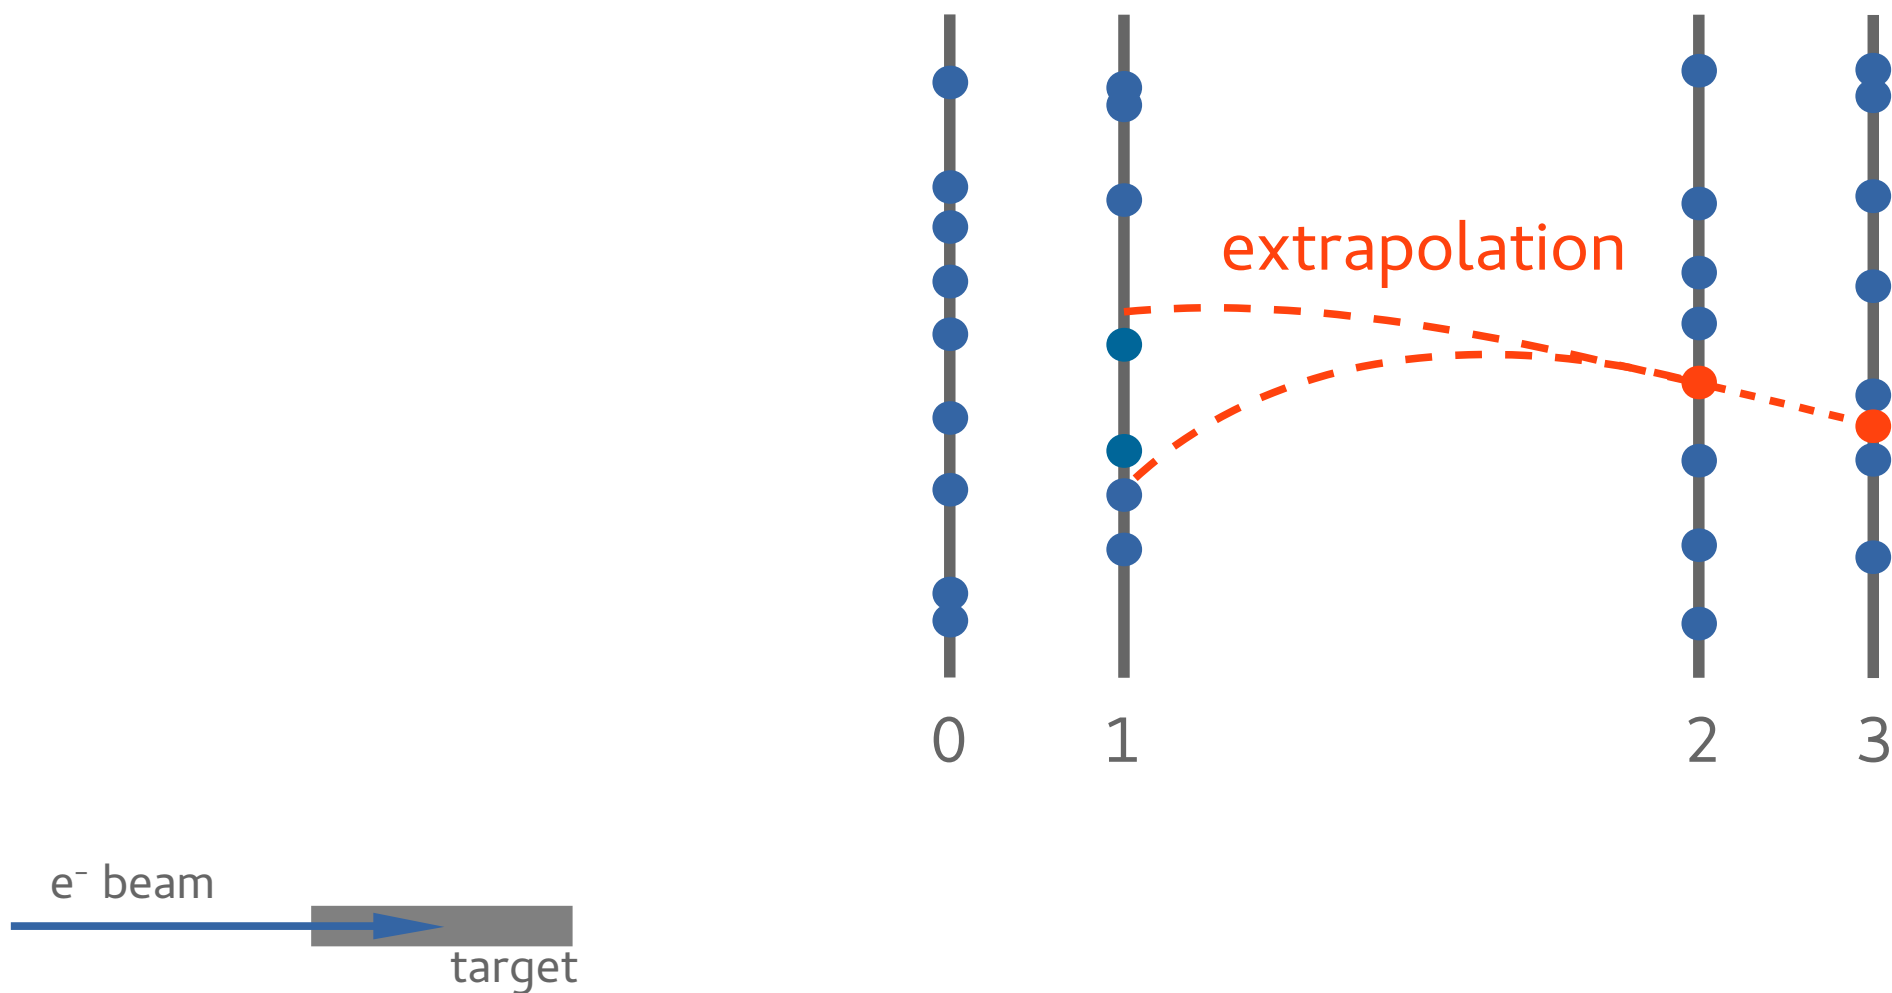

# y-z view

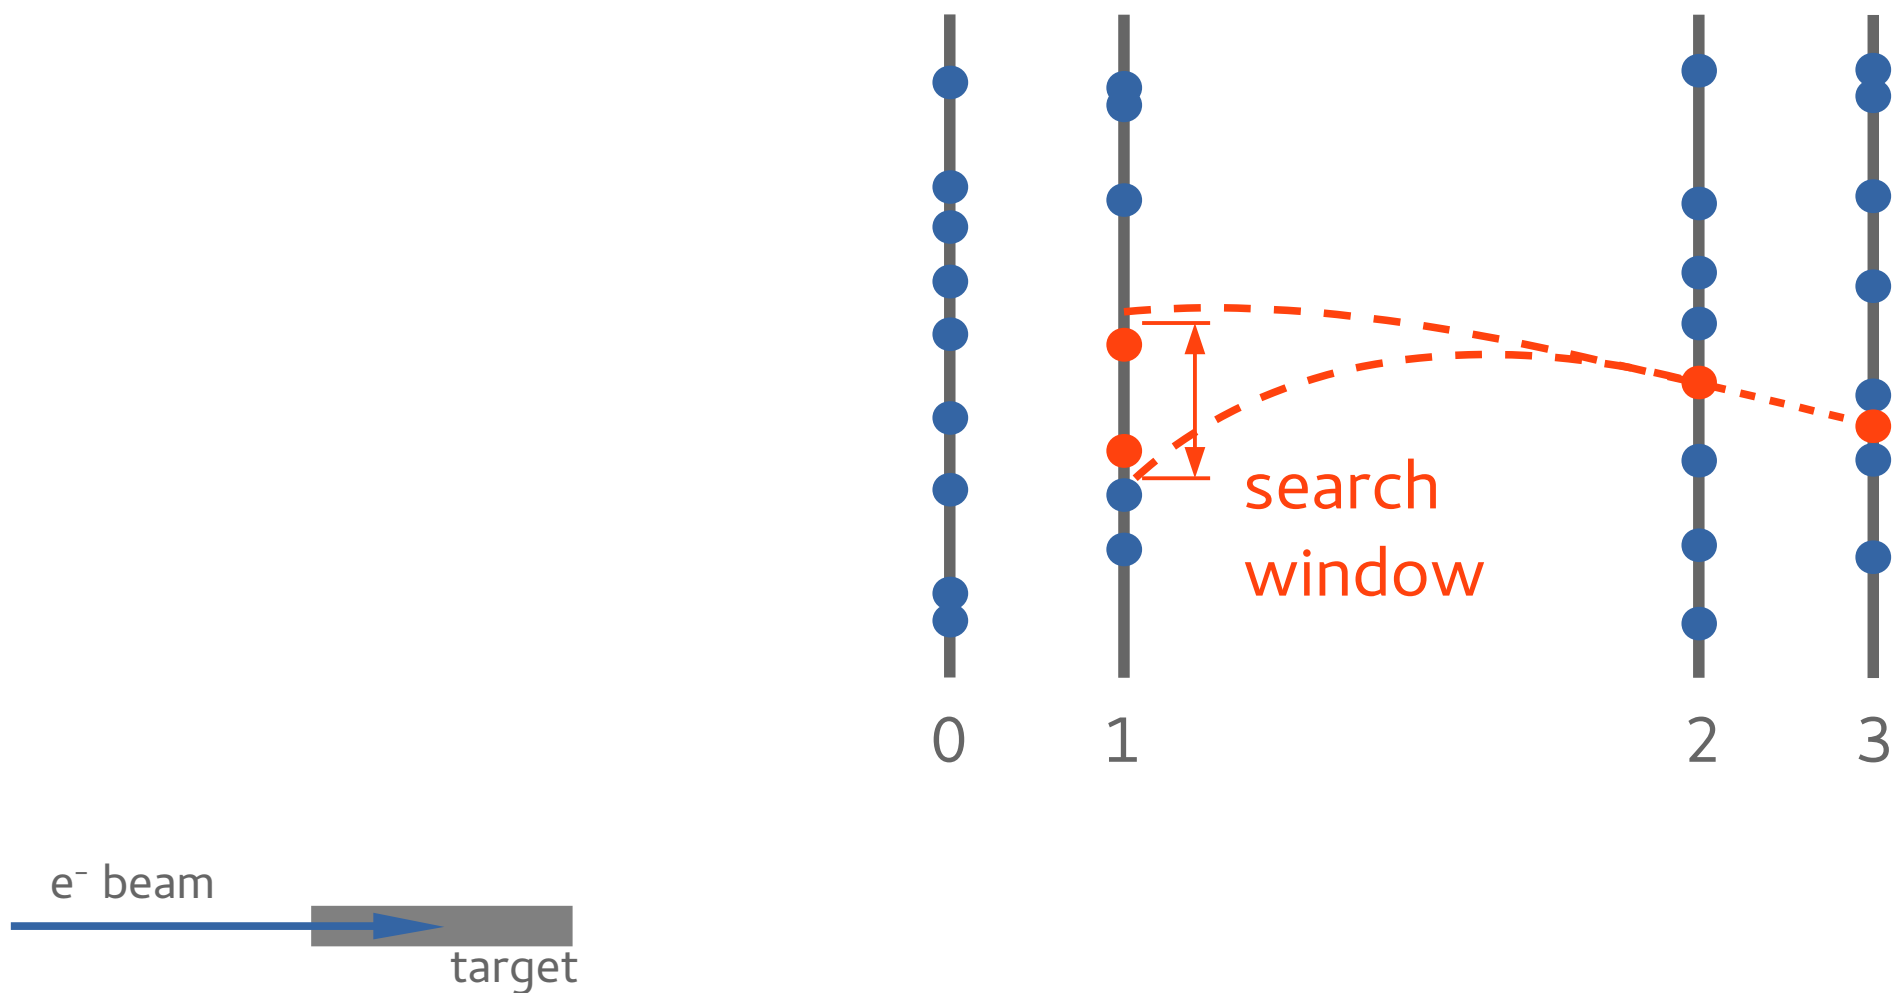

# Track following

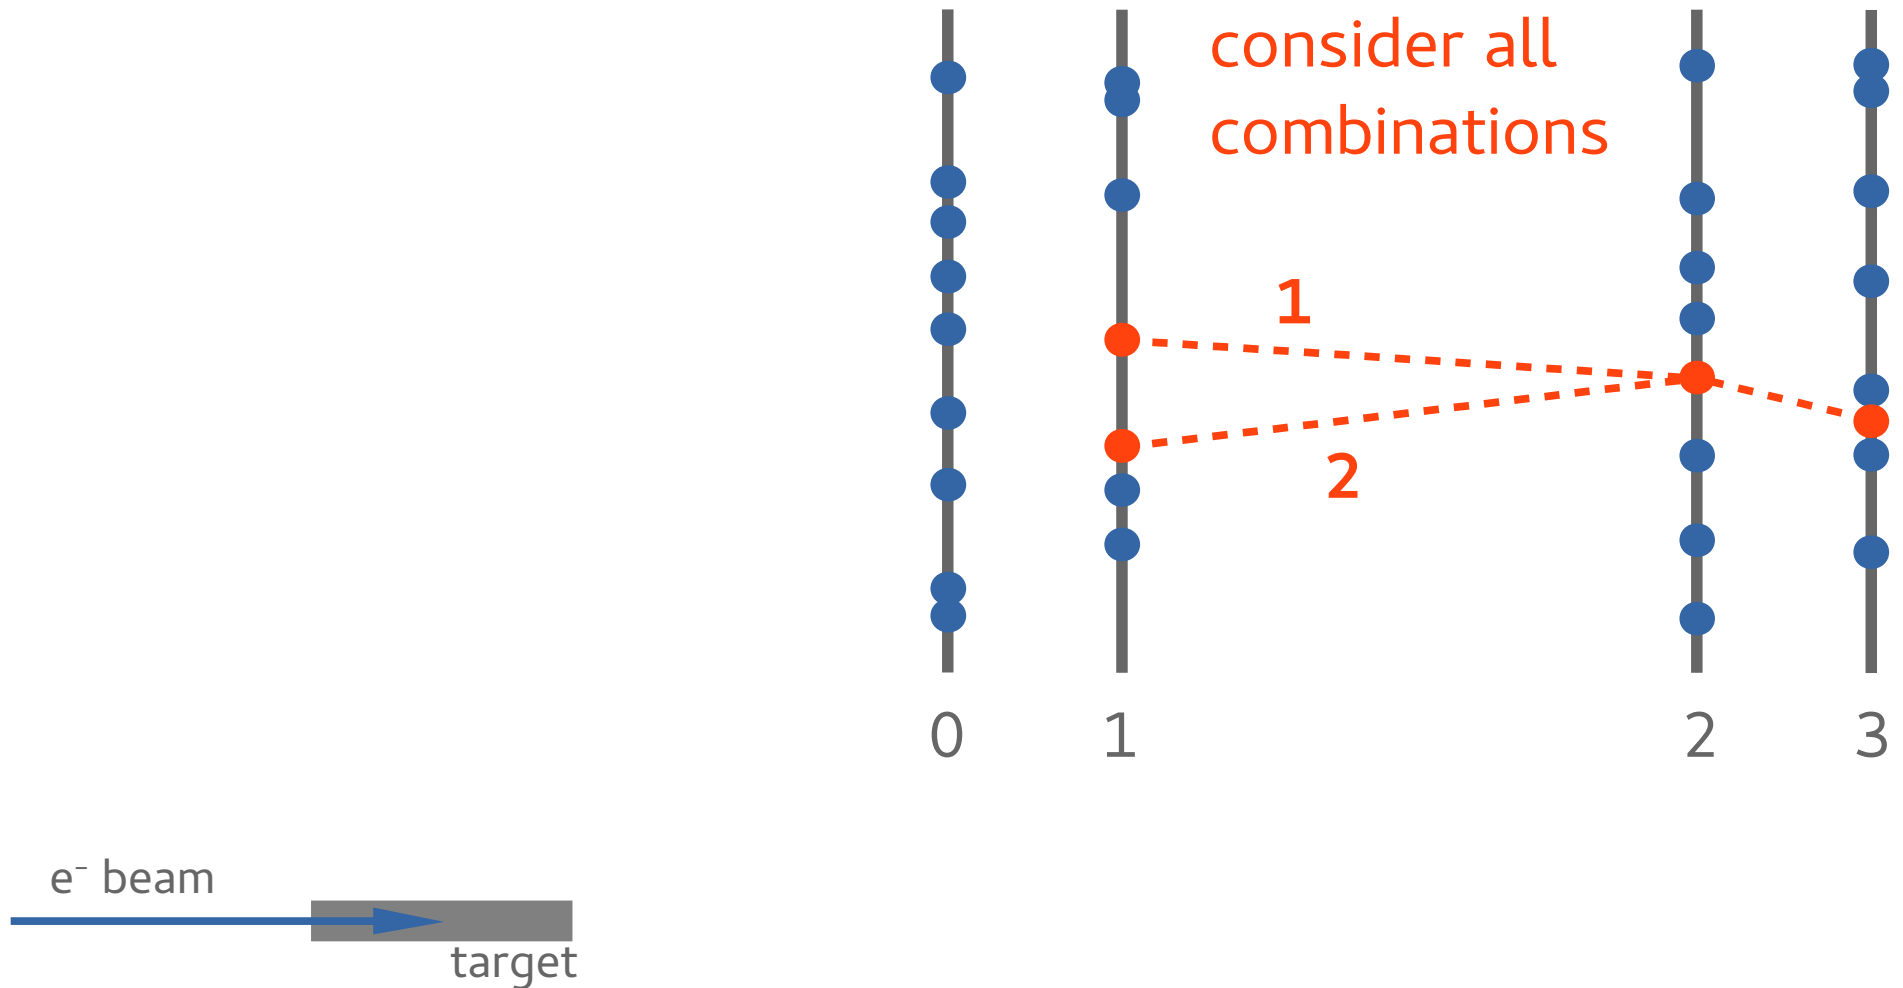

# Track following

# Track following

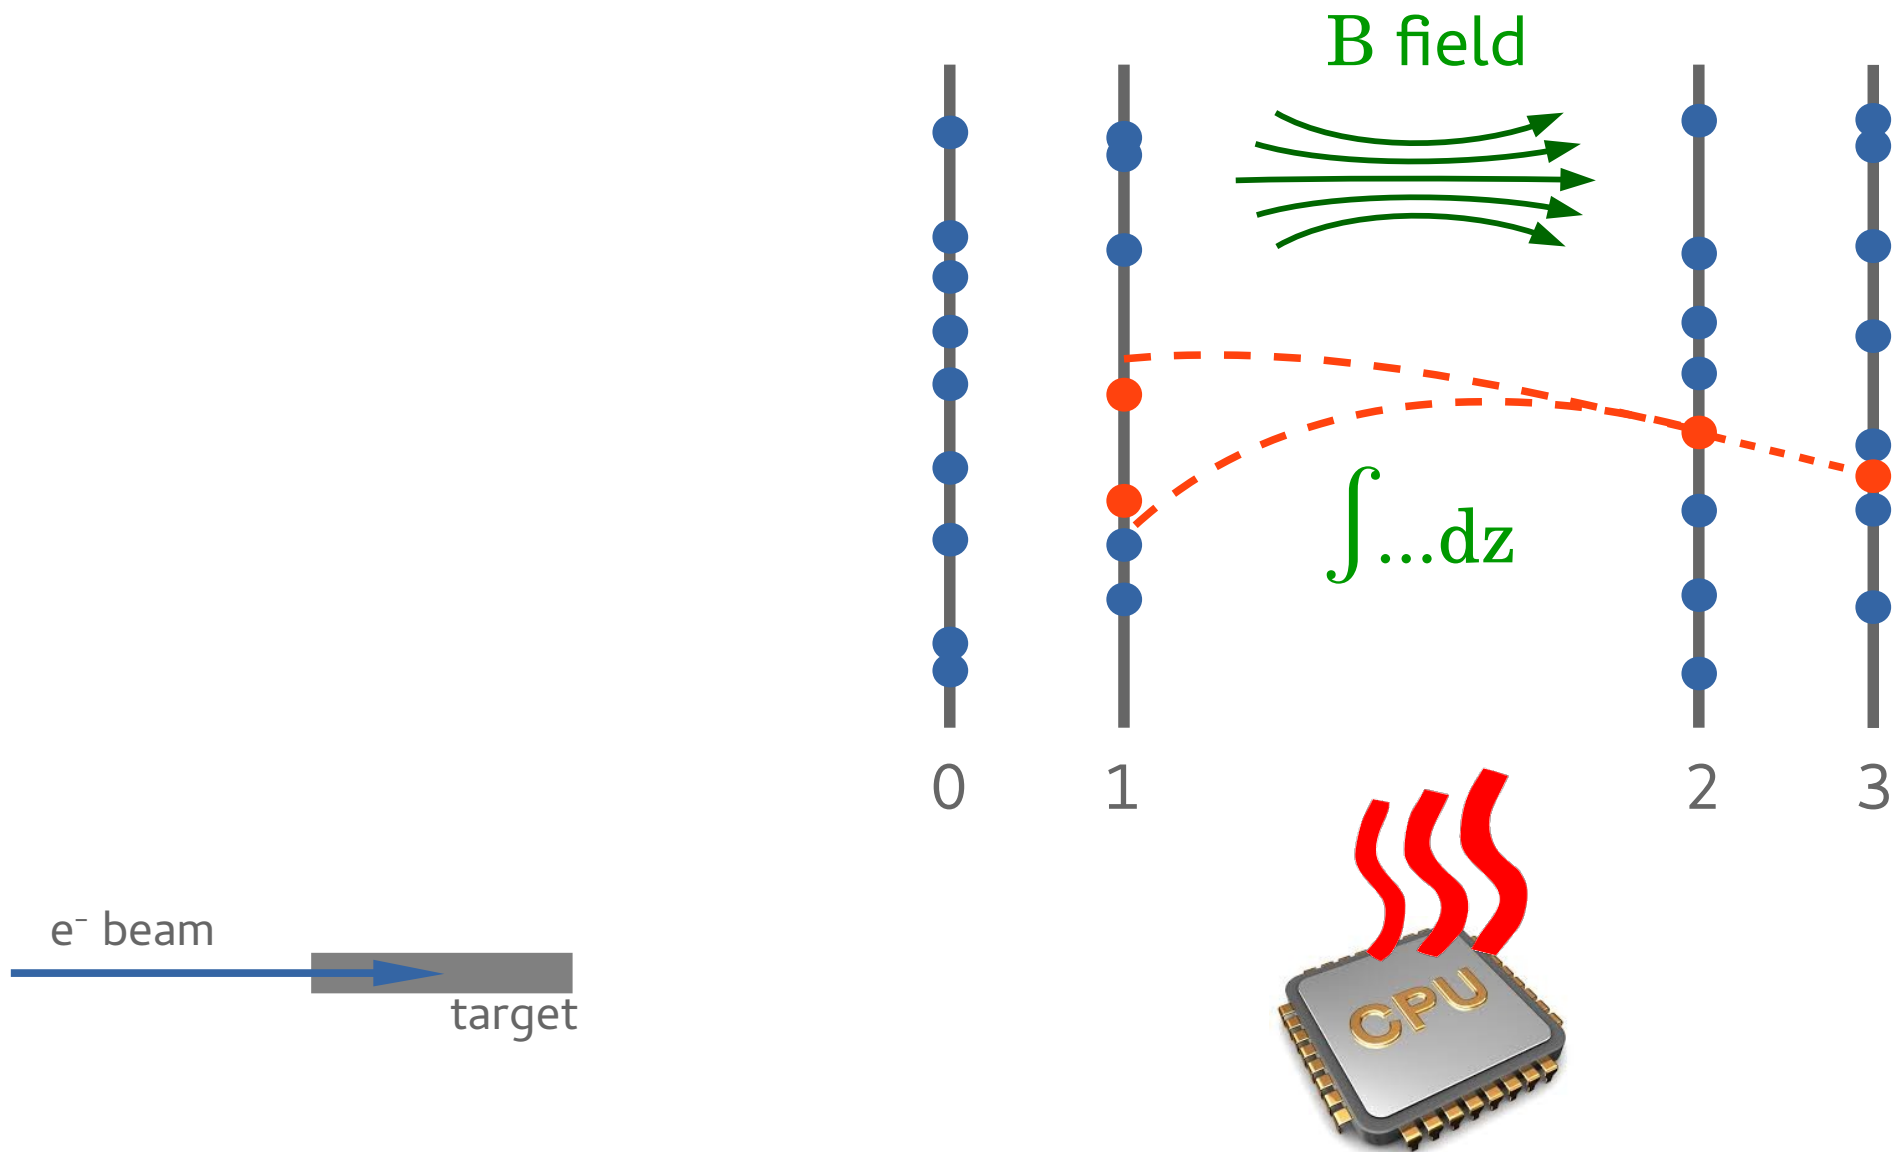

# Track following

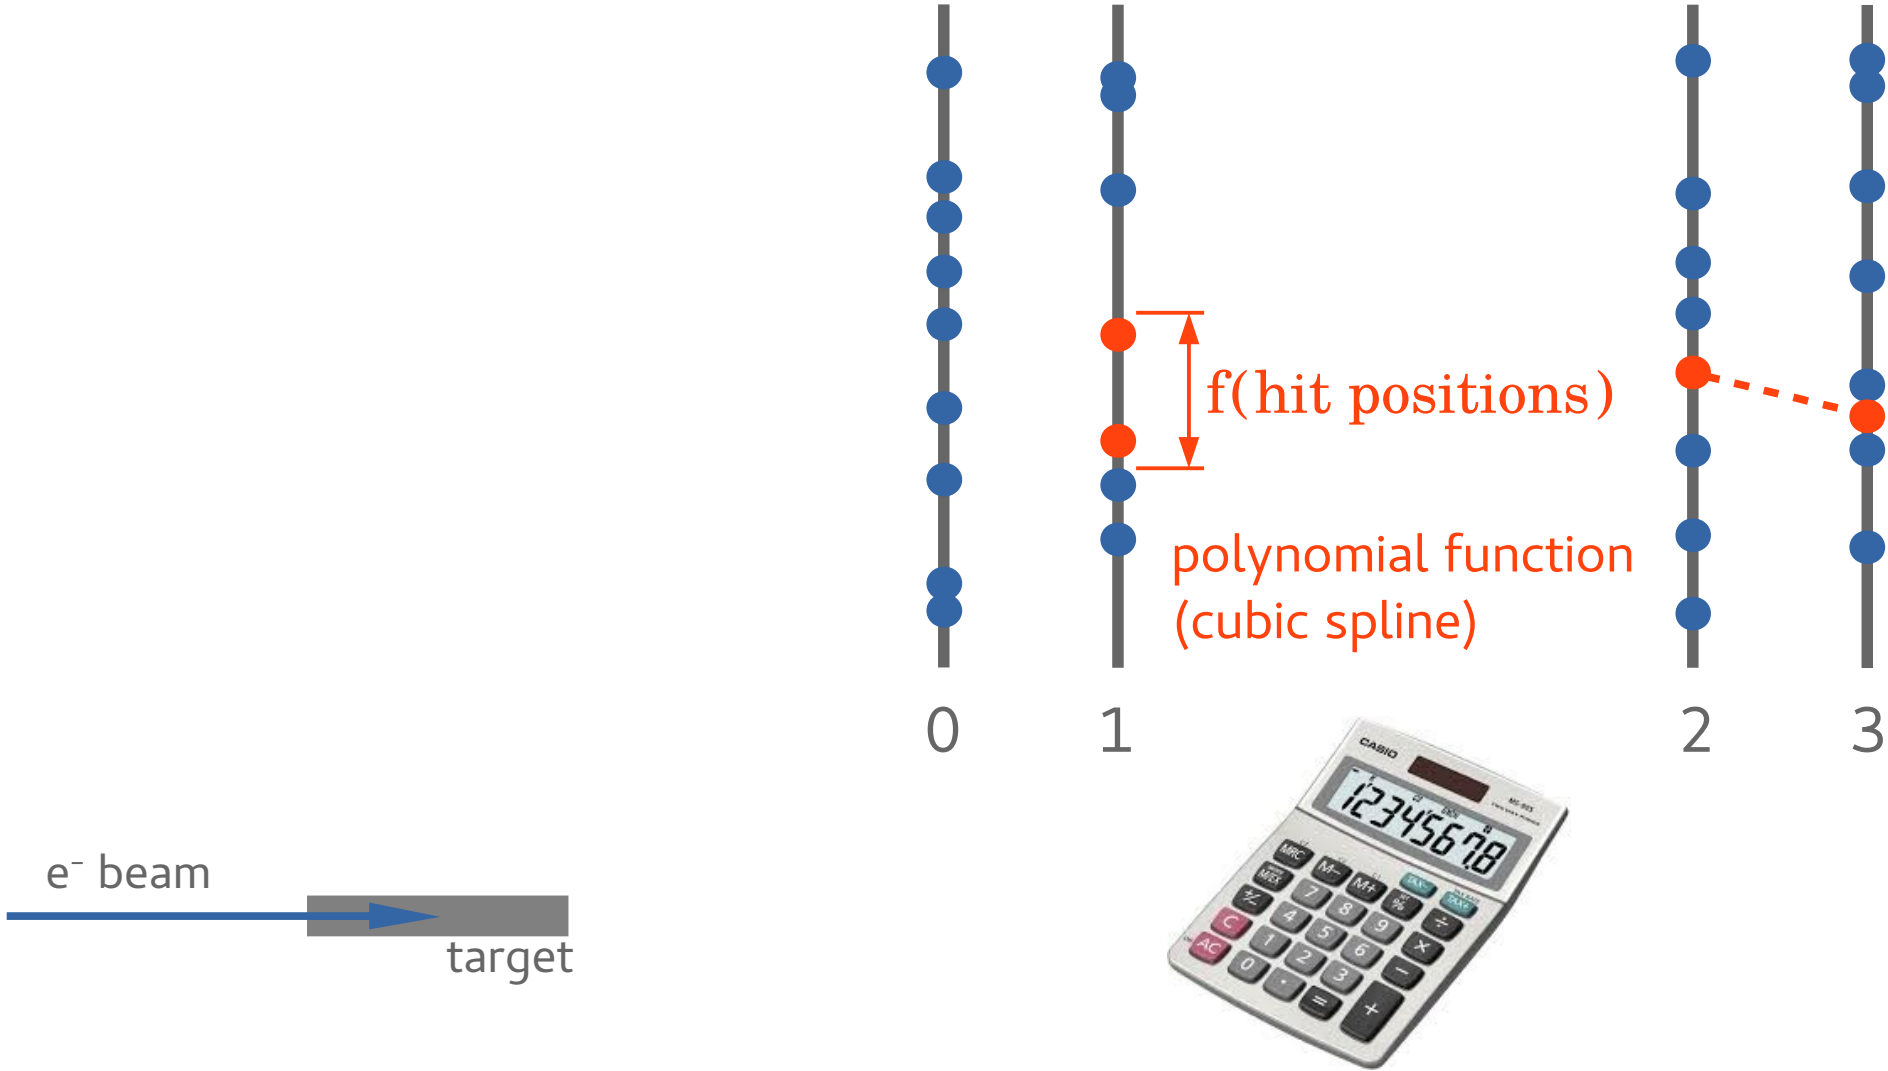

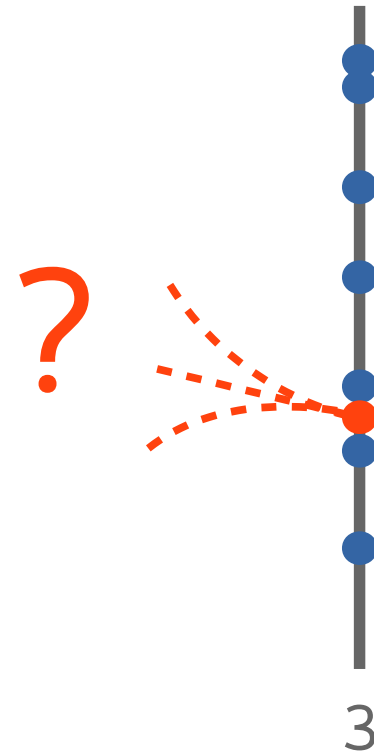

# Track following

# Track following with parameterized search windows

How to extrapolate?

# Extrapolation with constraints

# Compare with reference tracks

- ▶ from MC
- ▶ run at low beam rate; consider all combinations; select by  $\chi^2$ .

How to construct the parameterizations?

# Search window for plane 2

# Search window for plane 2

Collect large number of  
reference tracks

Group tracks  
in  $R_3$  bins

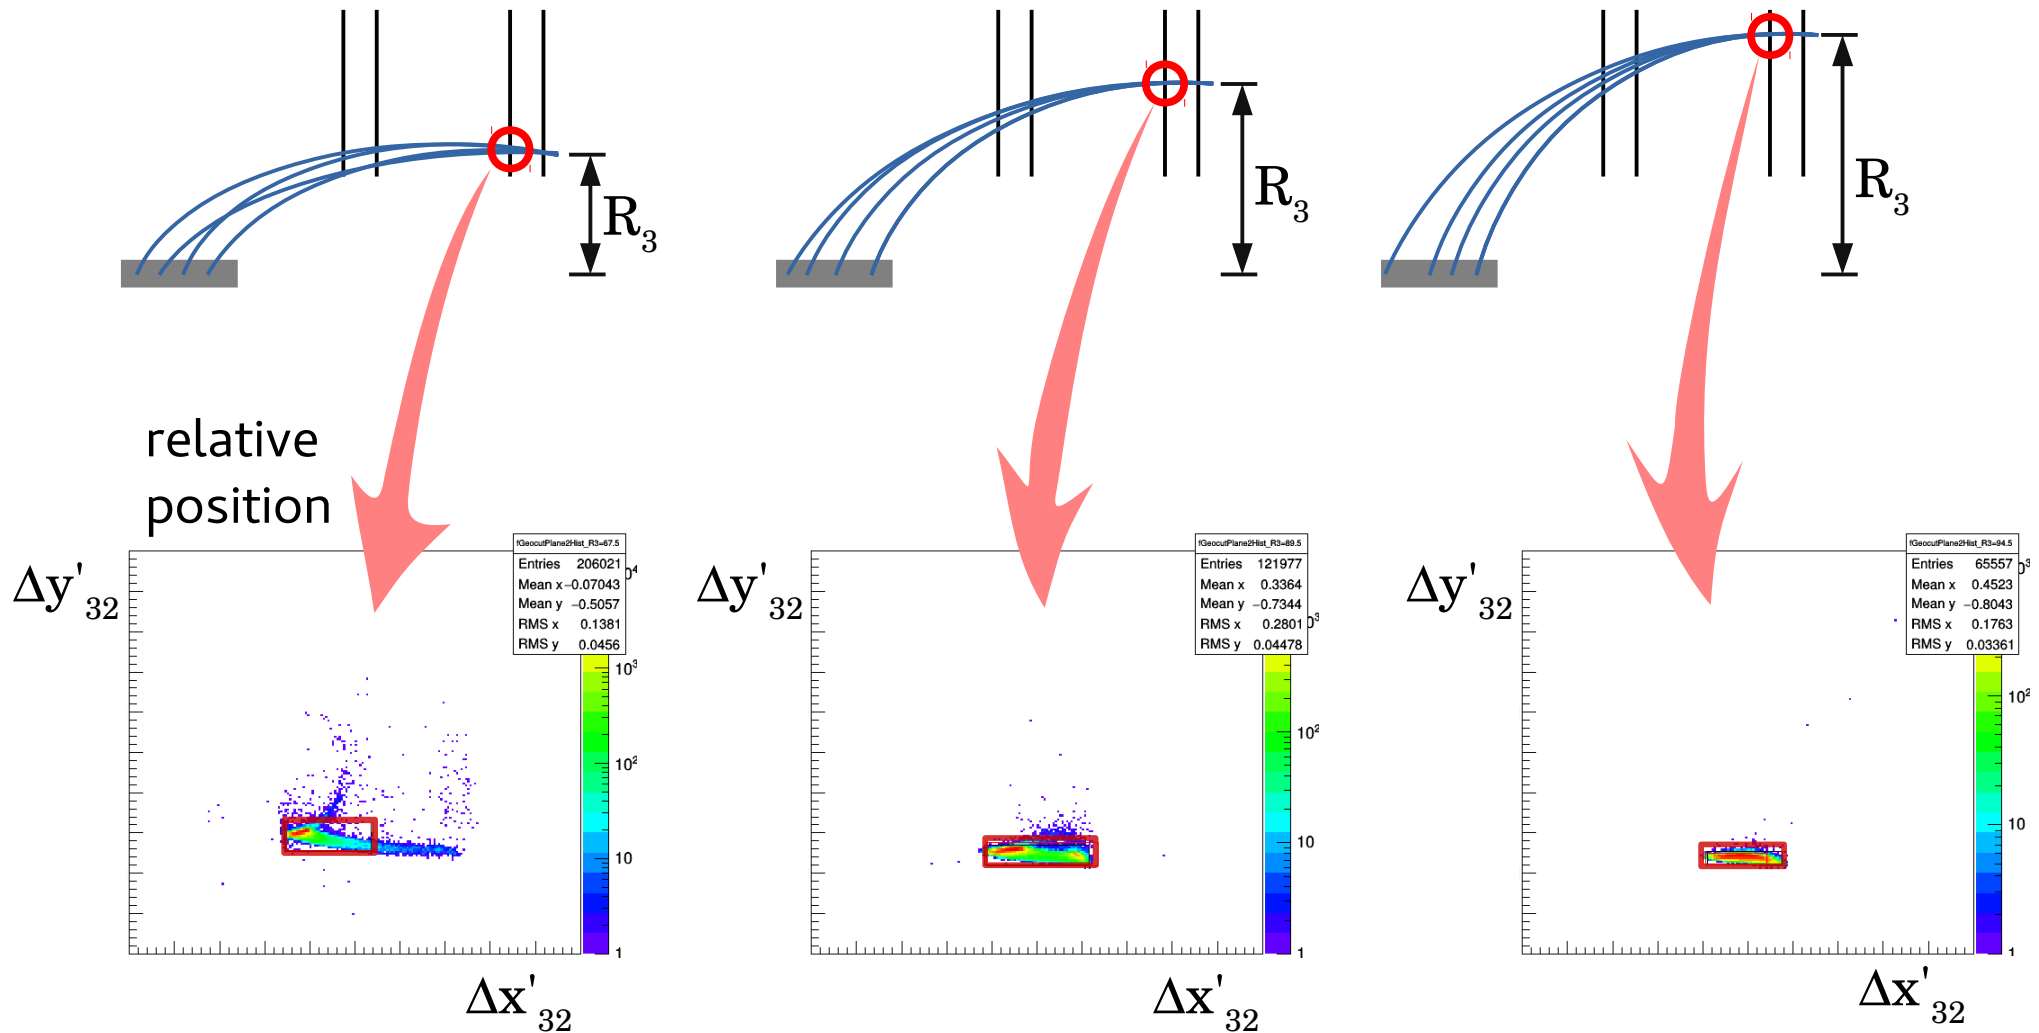

# Search window for every $R_3$ bin:

# Extract window position and size:

$R_3$	$x_{\text{POS}}$	$y_{\text{POS}}$	$x_{\text{SIZE}}$	$y_{\text{SIZE}}$	$\varphi_{\text{ROT}}$
...	...	...	...	...	...
value	■ ■ ■ ■	■ ■ ■ ■	■ ■ ■ ■	■ ■ ■ ■	■ ■ ■ ■
value	■ ■ ■ ■	■ ■ ■ ■	■ ■ ■ ■	■ ■ ■ ■	■ ■ ■ ■

...	...	...	...	...	...

# Search window for plane 1

$R_3$	$\Delta x'_{23}$	$\Delta y'_{23}$	$x_{\text{POS}}$	$y_{\text{POS}}$	$x_{\text{SIZE}}$	$y_{\text{SIZE}}$	$\varphi_{\text{ROT}}$
...	...	...	...	...	...	...	...
...	...	...	...	...	...	...	...
...	...	...	...	...	...	...	...

bin by  
 $\{R_3, \Delta x'_{23}, \Delta y'_{23}\}$

Fit (in 3D)

determine  
the search  
windows

$$x_{\text{SIZE}} = x_{\text{SIZE}}(R_3, \Delta x'_{23}, \Delta y'_{23})$$

$$y_{\text{SIZE}} = y_{\text{SIZE}}(R_3, \Delta x'_{23}, \Delta y'_{23})$$

$$x_{\text{POS}} = x_{\text{POS}}(R_3, \Delta x'_{23}, \Delta y'_{23})$$

$$y_{\text{POS}} = y_{\text{POS}}(R_3, \Delta x'_{23}, \Delta y'_{23})$$

$$\varphi_{\text{ROT}} = \varphi_{\text{ROT}}(R_3, \Delta x'_{23}, \Delta y'_{23})$$

# Search window for plane 0

# Relative distance from the center of the search window

Overall about 90% efficiency (depending on settings). 37

# Performance

Number of candidates per signal track

# Summary

Parameterization-based tracking:

- replaces rigorous model calculations by simple analytical parametric functions
- parameters can be tuned based on real data or simulation
- enables accurate, efficient, and very fast track finding
- works well for P2 due to narrow momentum range
