

# Institute for Physics - Theoretical High Energy Physics

## POSTDOCTORAL POSITIONS

The Theoretical High-Energy Physics Group at the Institute for Physics at Johannes Gutenberg University Mainz anticipates having some positions to fill at the postdoctoral level (TVL E13). The appointments are for three years starting in fall 2018 or earlier.

The group consists of Johannes Henn, Gabriele Honecker, Tobias Hurth, Joachim Kopp, Matthias Neubert, Martin Reuter, Pedro Schwaller, William Shepherd, Hubert Spiesberger, Stefan Weinzierl, and a significant number of postdoctoral fellows, PhD and master students. The interests of the group cover a wide range of topics in particle physics, astrophysics, and field theory such as LHC phenomenology, flavor and top quark physics, strong interactions, scattering amplitudes, effective field theory, extensions of the standard model, extra dimensions, neutrino physics, dark matter, gravitational waves, conformal field theory, string theory and string phenomenology. More detailed information about the group can be found here: [www.thep.physik.uni-mainz.de/](http://www.thep.physik.uni-mainz.de/).

Our research activities are integrated with the Excellence Cluster "Precision Physics, Fundamental Interactions and Structure of Matter" (PRISMA) in Mainz (<http://www.prisma.uni-mainz.de>). The proximity to the Mainz Institute for Theoretical Physics (<https://mitp.uni-mainz.de/>) ensures excellent opportunities for inter-national collaboration. In addition, postdocs can profit from exchange agreements with ICTP/SAIFR São Paulo and Fermilab.

Applicants should submit

- Cover Letter
- Curriculum Vitae
- Research Statement
- Publication List
- Three Reference Letters

All materials should be submitted online using the Academic Jobs Online website: <https://academicjobsonline.org/ajo/jobs/10348>.

The deadline for applications and related materials is December 1st, 2017. Later applications will be considered until the positions are filled.
