Table S1 Tree-ring inter-site correlations and climate signals. Correlations of the larch (orange) and spruce (green) RWI₃₀-chronologies with JJA temperatures (30yr-spline filtered), and intra-site larch-to-spruce correlations (grey) over the 1850-2000 period.

Table S2 Station data used for assessing the climate envelope in different larch growing regions (Fig. 6).

Figure S1 Delimitation of outbreak regions after Baltensweiler & Rubli (1999).

Figure S2 Regional December/January/February temperatures (dots and dashed lines, 1961-1990 mean) within the different larch growing regions along elevation.

Table S1 Tree-ring inter-site correlations and climate signals. Correlations of the larch (orange) and spruce (green) RWI₃₀-chronologies with JJA temperatures (30yr-spline filtered), and intra-site larch-to-spruce correlations (grey) over the 1850-2000 period.
