Appendix A. Supplementary data

\textbf{Fig. A.1.} Tree-ring metrics of birch and pine growth near the Kåfjord close to the *Tirpitz* anchor point (1 = closest to 5 = furthermost). a) shows the percentage of trees at each site with an absent ring for each year, b) the detrended ring-width index (RWI) chronologies, and c) the sample replication (number of increment cores) as an estimate of the age structure at the different sites.
